

During the discussion, it was emphasized that fostering partnerships between academia and industry is crucial. While the academic perspective is currently predominant, increased involvement from industry stakeholders would provide a broader viewpoint. The suggestion was made that 4TU could serve as a mediator in facilitating these collaborations. Moreover, the academia was urged to focus on developing both short-term and long-term solutions to address industry challenges effectively. The importance of seeking guidance from industry stakeholders to refine our vision and gain insights from alternative perspectives was emphasized. Ultimately, the consensus was that co-creating solutions with industry is essential for driving innovation and addressing real-world problems.
