The influx of students exhibits a high background diversity. In addition, an increase in influx from post-master students (PhD and Professional Doctorate in Engineering – PDEng) is observed, which requires flexibility in the exit level.

The Framework is designed to offer to students the possibility to fill the knowledge gap for both the topics, receiving dedicated materials and extra-support.

The evaluation looked for suggestions and remarks on understandability of the Framework, user-friendliness of the Framework and on representability of the possible domains of interest.
