

Manufacturing and geopolitical challenges for energy transition:

The following points have been discussed:

1. Does research have to be completely multidisciplinary? It can also be good enough to work side by side
2. You only get real cooperation if there is 'something to gain' for all parties.
3. Fundamental research may need a different way of working together (if it is needed at all) than applied research
4. Understanding another discipline requires a (large) investment of time
5. Can 4TU accommodate guest appointments for researchers at other universities
