Course team

Marleen Keijzer, Dennis den Ouden, Iris Smit, Kees Vuik

Esmée Vermolen Piotr Benedysiuk Myrte van Belkom
Hans de Munnik Jenneke van der Poel

Support & Input

Nelson Ribeiro Jorge, Ingrid Vos, NewMedia Center

Ingeborg Goddijn, Henk Schuttelaars, Sasa Kenjeres, ITAV

Why a MOOC?

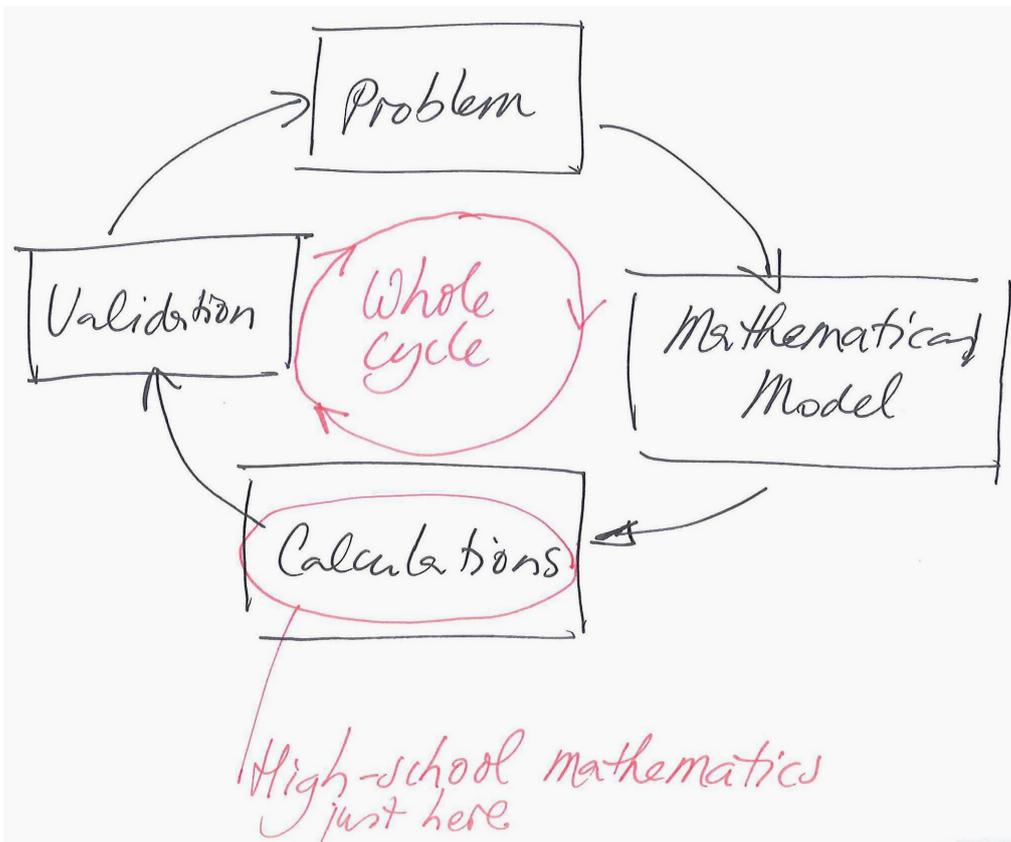

- ▶ Promote **TU Delft**
- ▶ Produce material for on-campus courses
- ▶ Lure students into paid online courses
- ▶ Educate the world
- ▶ Promote mathematics
- ▶ Let staff learn to design online courses

Mathematical Modelling Basics????

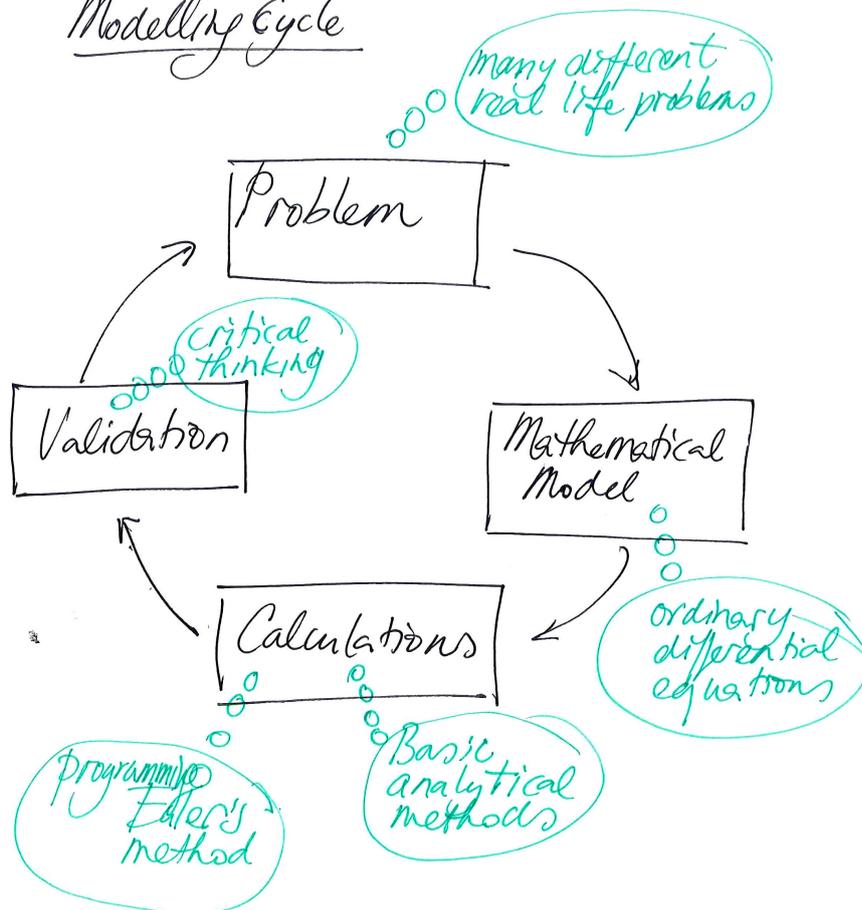

Learning objective:

Applying mathematics to solve real-life problems

Target audience: 000 our #1 year
TU students
in January
BSc students in science or engineering

Modelling Cycle

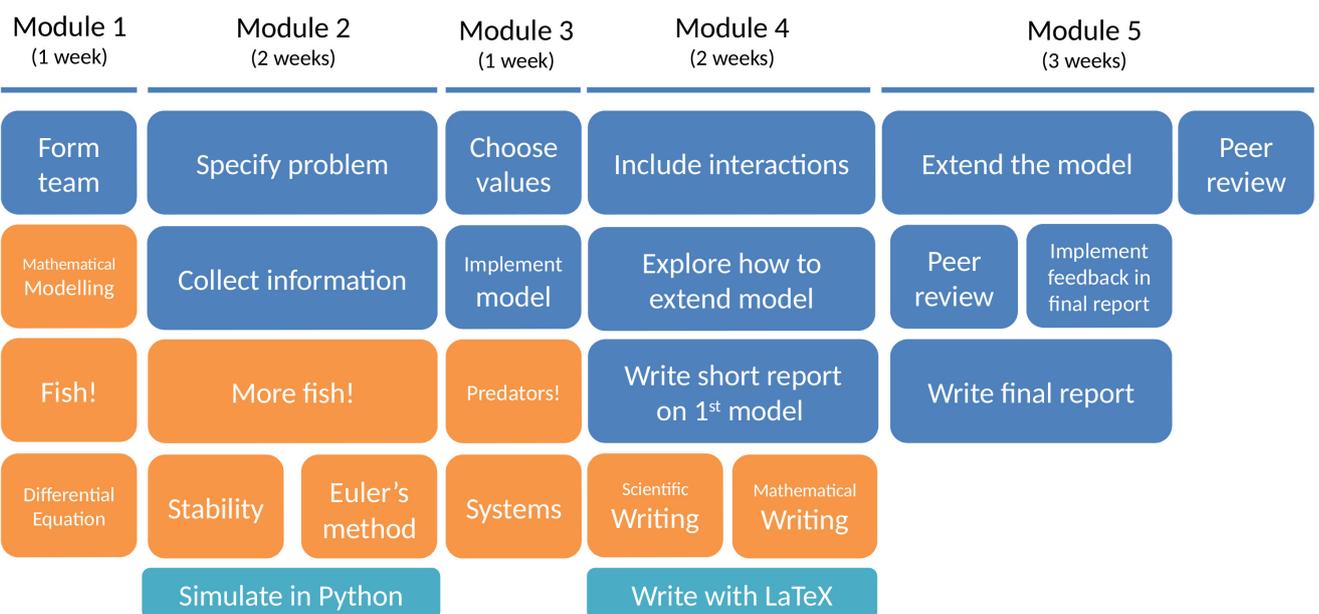

+

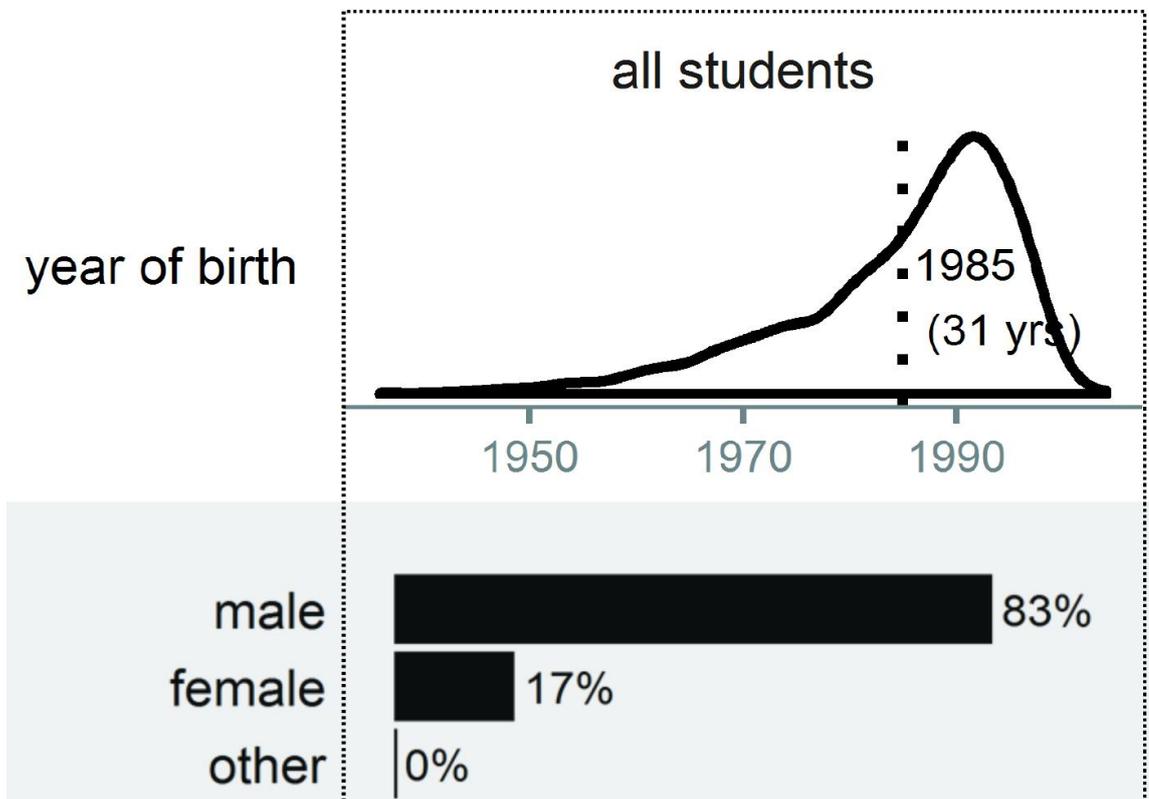

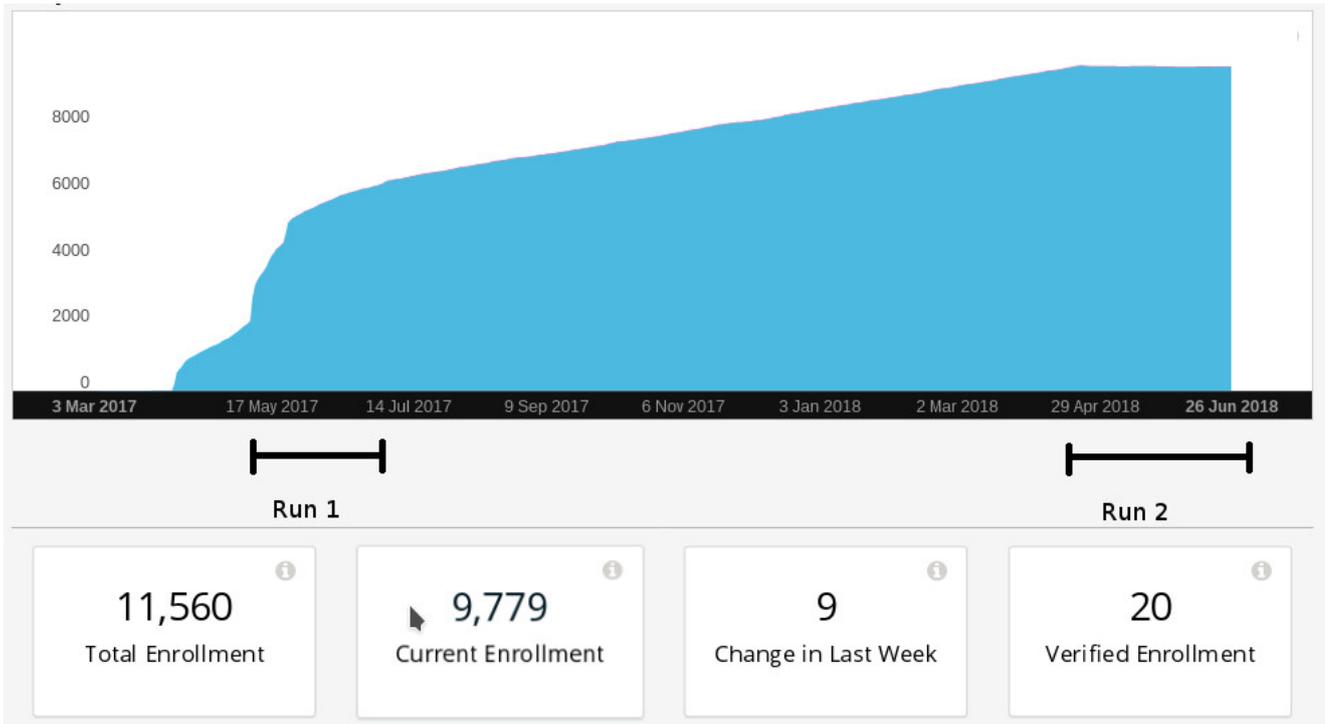

Communication with peers & problem owners

peer reviews

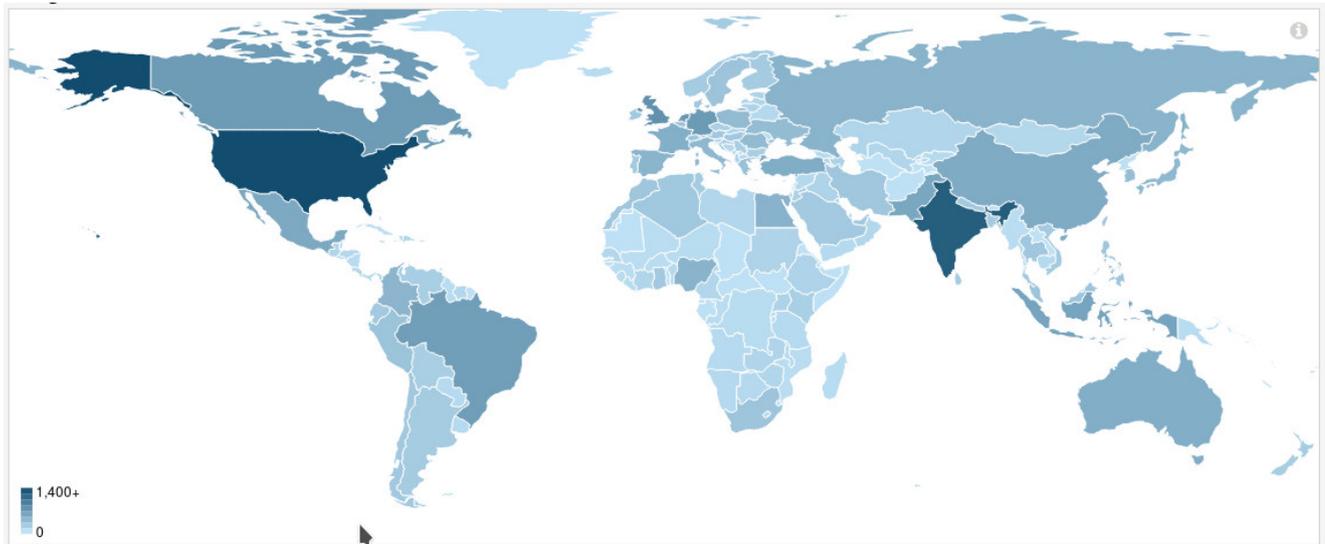

Scientific writing

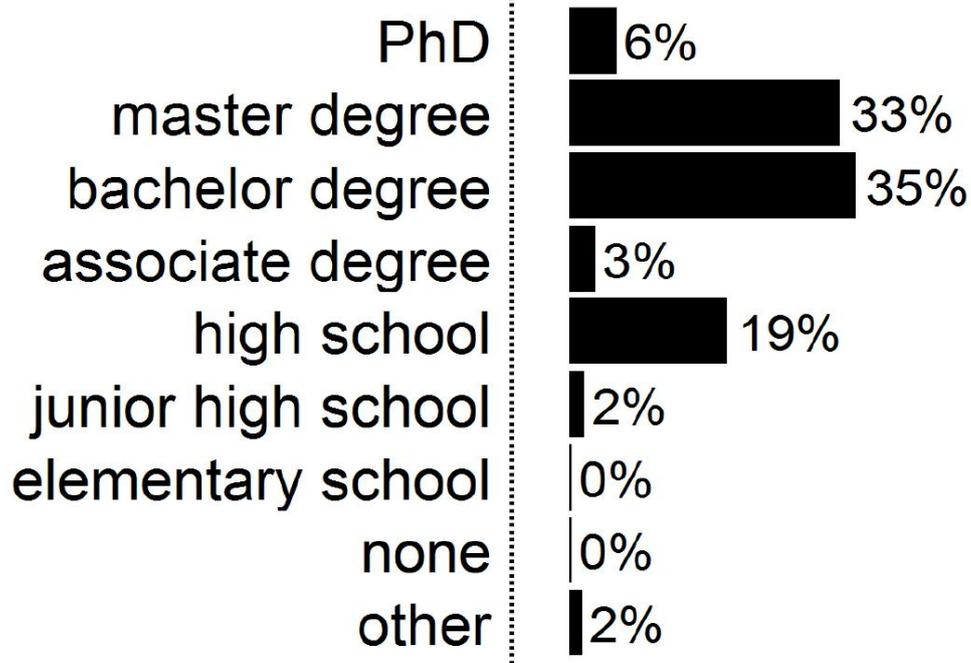

Enrollment

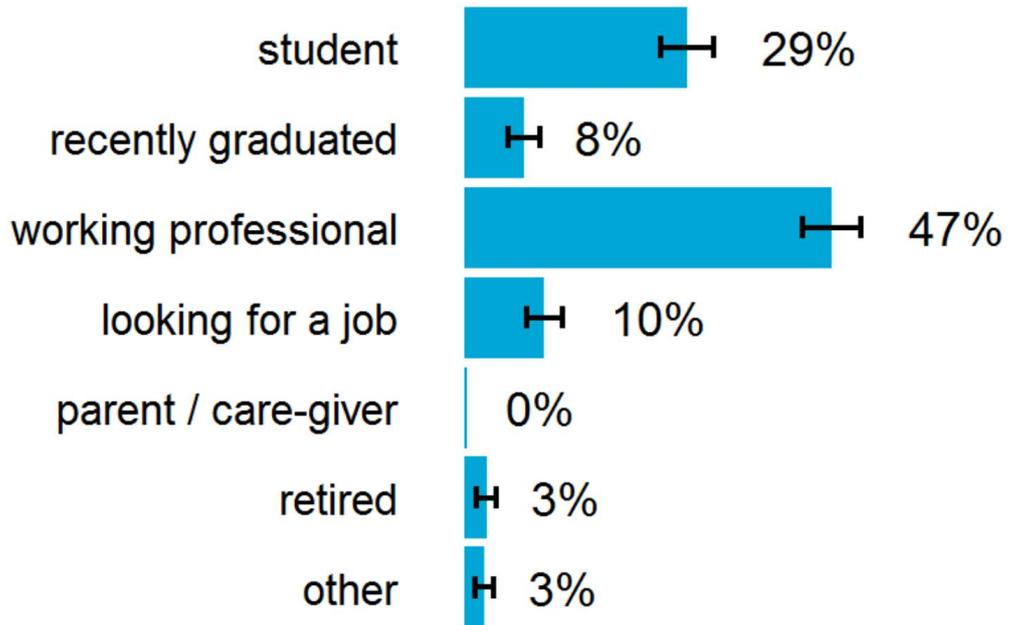

Geographic distribution learners

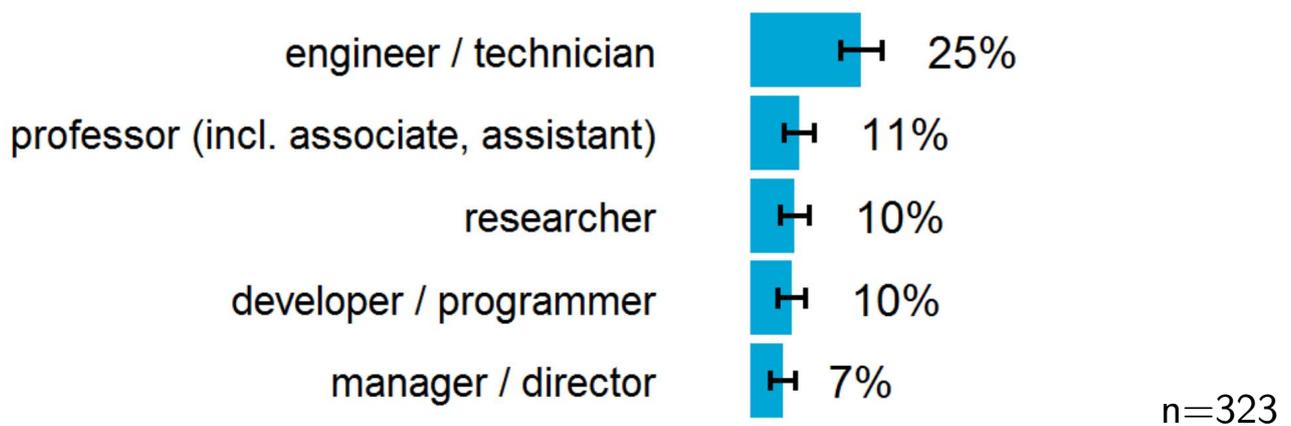

USA	1500 (15%)	Netherlands	400 (4%)	Nigeria	140
India	1200 (12%)	Brazil	300	Ghana	40
UK	400 (4%)	China	200	Nepal	40

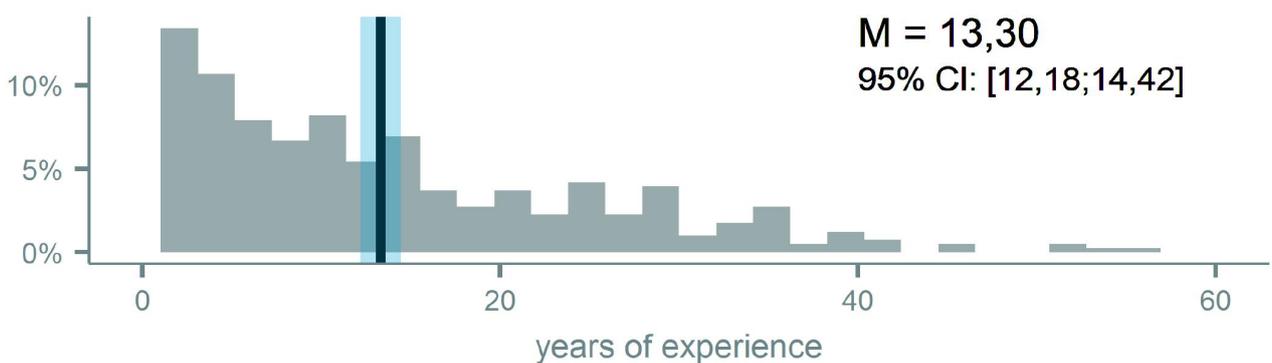

pre-survey, n=687

n=323

n=403

Numbers (first run Spring 2017)

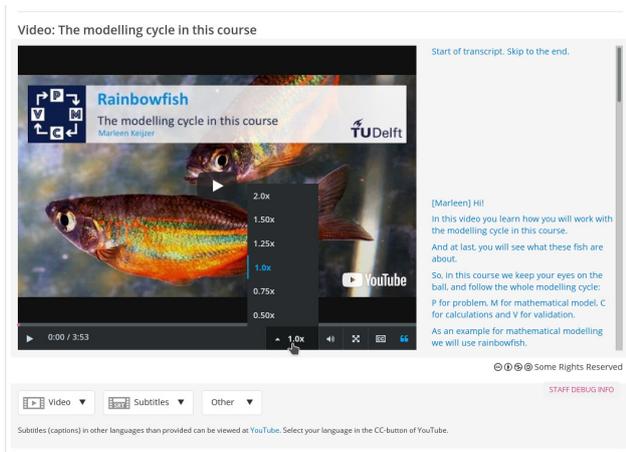

- ▶ 7700 enrolled
- ▶ 4300 started the course
- ▶ 1900 tried problems
- ▶ 380 started at least half of the 23 videos
- ▶ 30 submitted first report
- ▶ 20 submitted final report
- ▶ 20 completed the course
- ▶ 24 filled out the post-survey

Project in team of 2 or solo

Active learning

Preferably, content is discovered by the students in exercises.

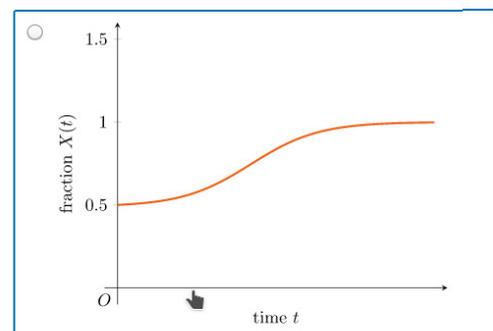

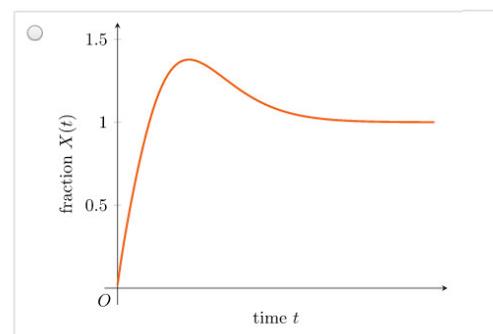

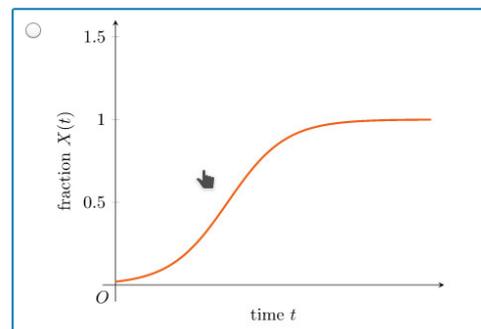

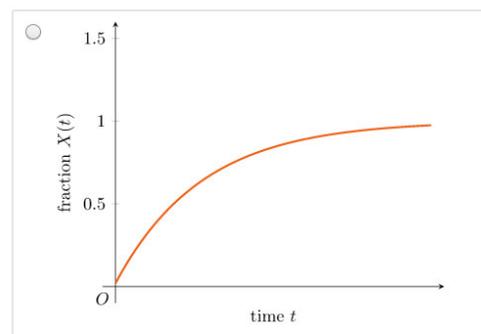

- ▶ Videos: short (3-6 minutes) and few (23)
- ▶ Texts: same
- ▶ Many formative exercises, with hints and feedback
- ▶ Consolidation in practice problems

Exercises: Multiple Choice

Exercise D

1 point possible (graded)

The graph of the solution $X(t)$ is

Submit You have used 0 of 1 attempt

Exercises: Numerical answers

Exercise C

1 point possible (graded)

Now use a smaller stepsize: $\Delta t = 0.5$, and approximate the population after 13 days.

$$P(13) \approx$$

Give your answer in two decimals.

Submit

You have used 0 of 10 attempts

?
Hint

Save

Show Answer

Exercises: Drag & Drop

Exercise C

1 point possible (graded)

[Keyboard Help](#)

PROBLEM

Using your graph and the information from the previous exercises, construct the phase line.

Navigation icons: right, left, right, left, right, left

Unused:

Submit You have used 0 of 3 attempts. Reset Show Answer

Exercises: questions with peer feedback

Exercise E (1 point possible)

Question

What do you think of the value you calculated in exercise D?

Answer

Reflection

Results

Step 1) Your Initial Answer

You can change this answer later, if you change your mind.

The value is correctly calculated and valid, because...

The value is correctly calculated, but not valid, because...

The value is not correctly calculated, but valid, because...

The value is neither correctly calculated nor valid, because...

Explain to other students why you chose this answer (Required):

I

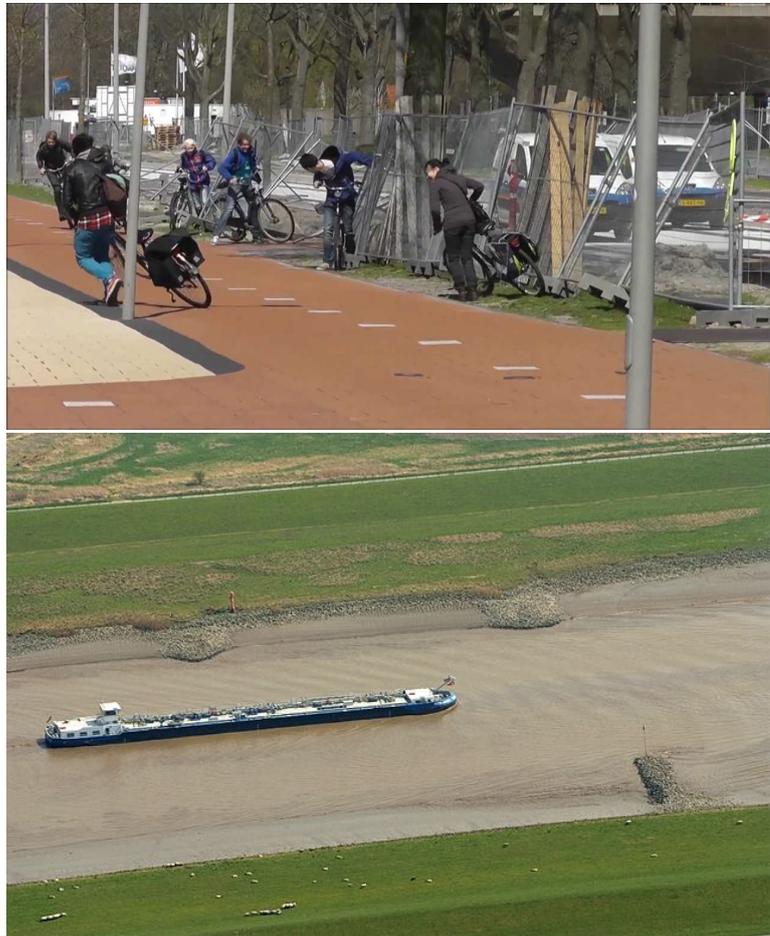

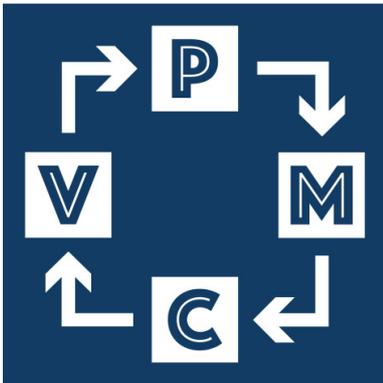

In the next step, you will be shown a selection of other responses that may help you refine your answer.

Note: In order to move to the next step, please choose an answer and briefly explain your choice.

Compensating for no face-to-face teaching

- ▶ Extremely clear instructions
- ▶ Much personal text
- ▶ 'Glue' text
- ▶ Discussions:
 - ▶ Questions for the course team.
 - ▶ Learners helping each other
 - ▶ 'Thinking Further'
- ▶ Project work in pairs
- ▶ Peer review of the reports
- ▶ Exhibition of the reports

Content

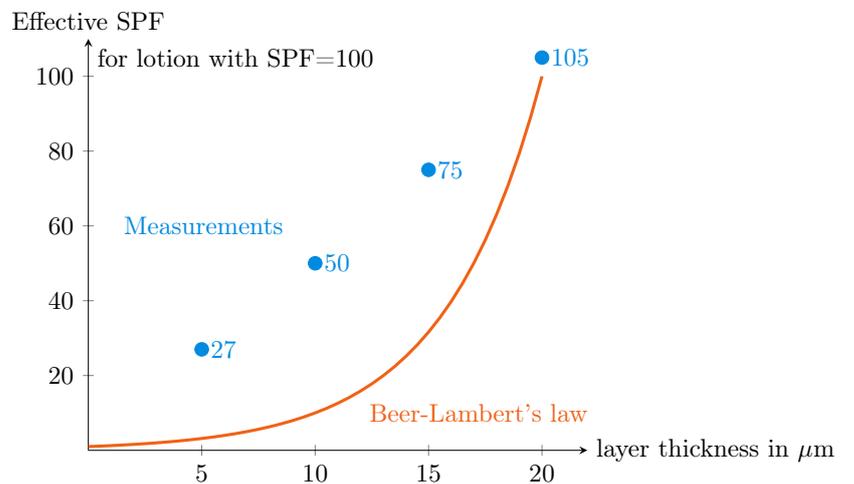

$$\frac{dP}{dt} = 0.7P$$

balance equation
derivation ode

Suncream applied in too thin a layer

Mixing problem

$$\frac{dP}{dt} = 0.7P - 20$$

direction field
equilibrium points

$$\frac{dP}{dt} = 0.7 \left(1 - \frac{P}{750} \right) P - 20$$

phase line
Euler's method
Python program

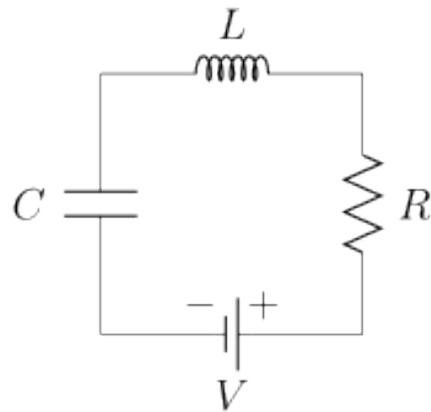

Flu epidemic

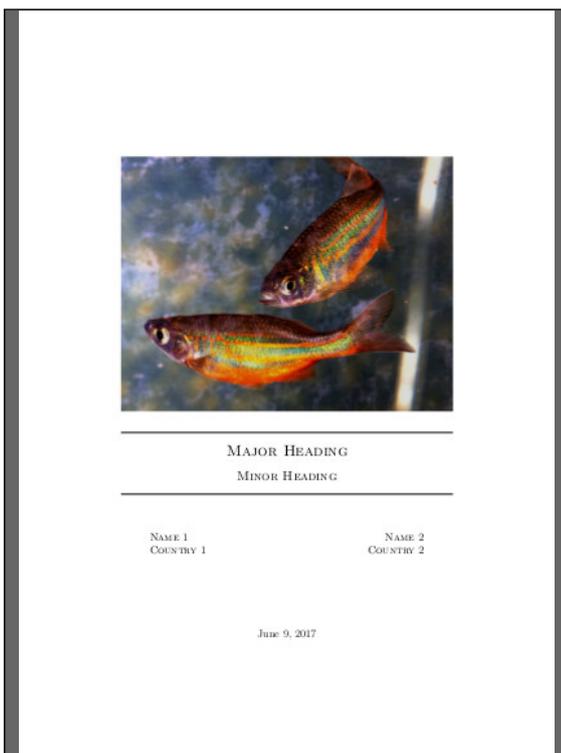

Design & simulate
100mHz laptop clock

$$\begin{cases} \frac{dP}{dt} = 0.7P - 0.007P^2 - 0.04PG \\ \frac{dG}{dt} = -0.25G + 0.008PG \end{cases}$$

phase plane
stability equilibrium points
arrays in Python

Scientific writing

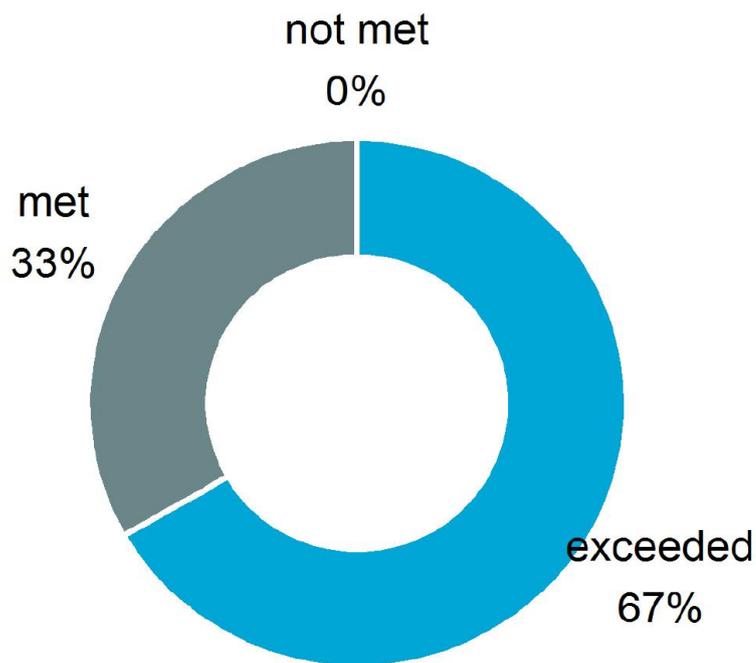

- ▶ Purpose & audience
- ▶ Structure
- ▶ Components
- ▶ Wording
- ▶ References
- ▶ Figures & Tables
- ▶ L^AT_EX

Exhibition of Reports

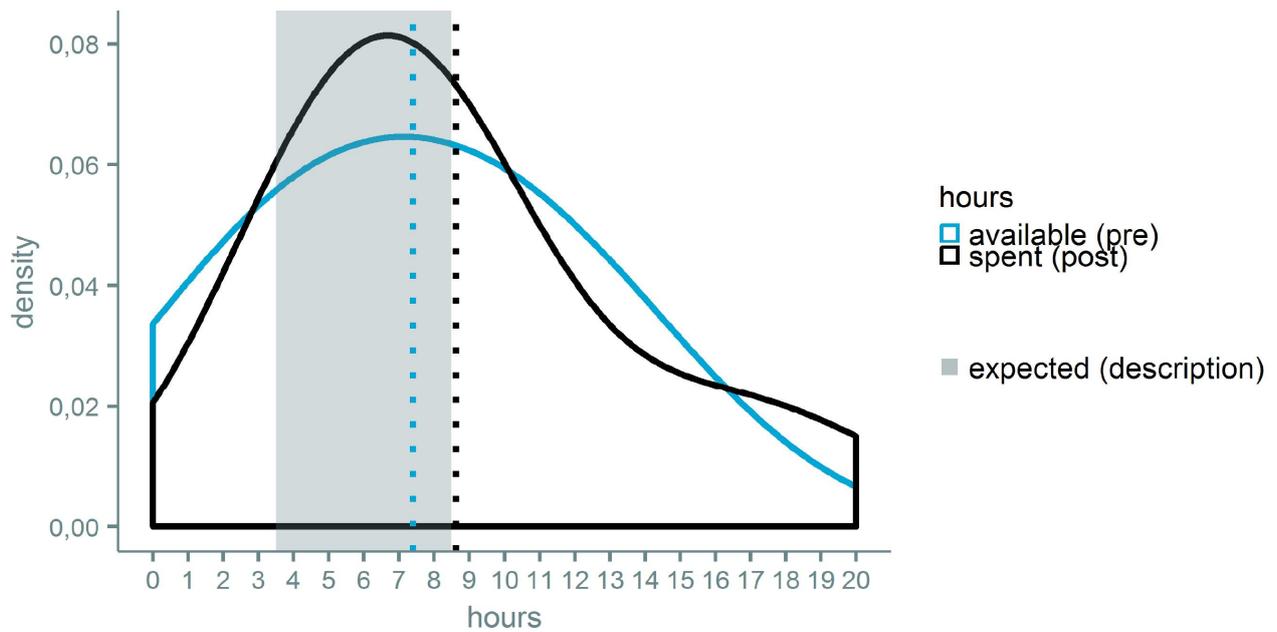

Learners' expectations were

n=18

Learners' available hours and hours spent

n=709

n=18

Learners liked

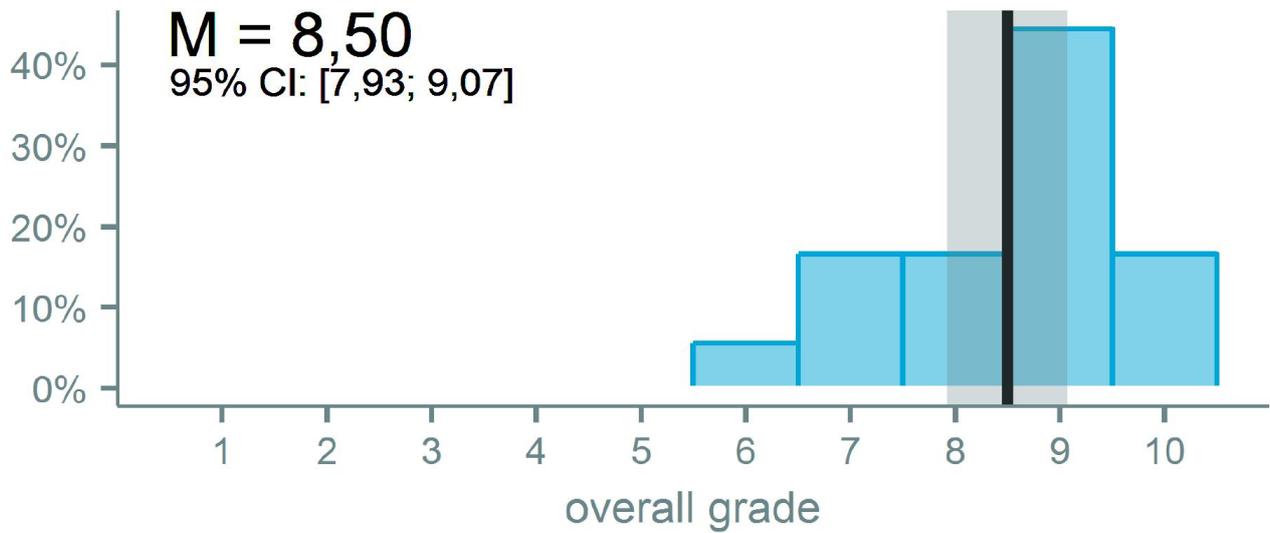

latex
content
writing
report
python

Learners found valuable

report solve
problems
modeling python
equations
differential
mathematical
using writing
method

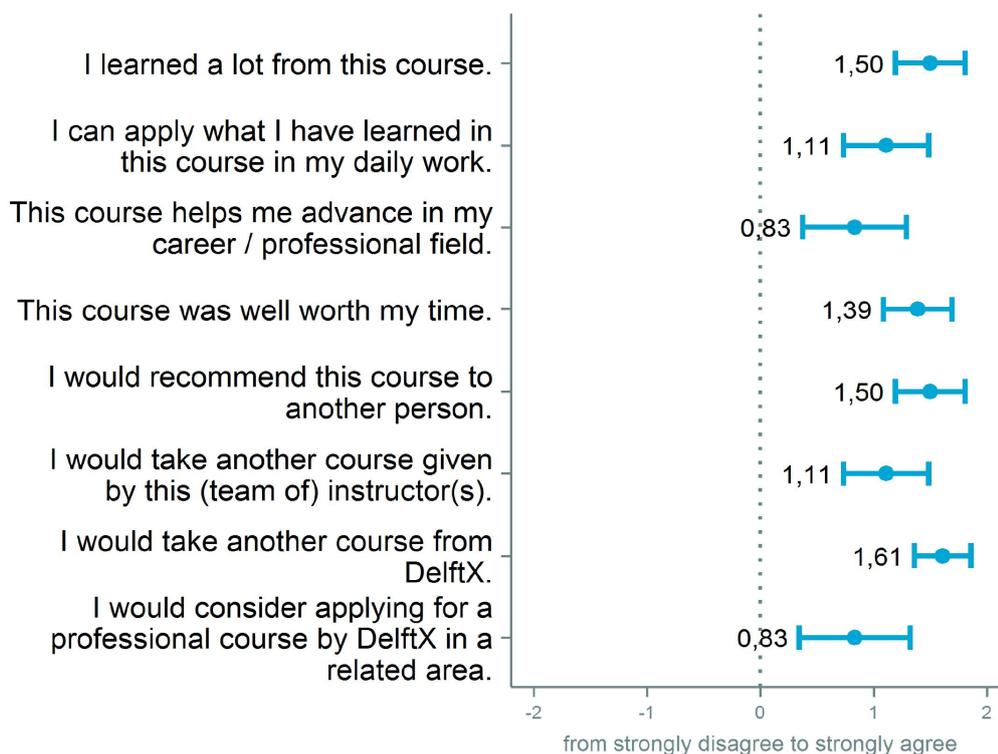

n=17-18

Learners gave the course the overall grade

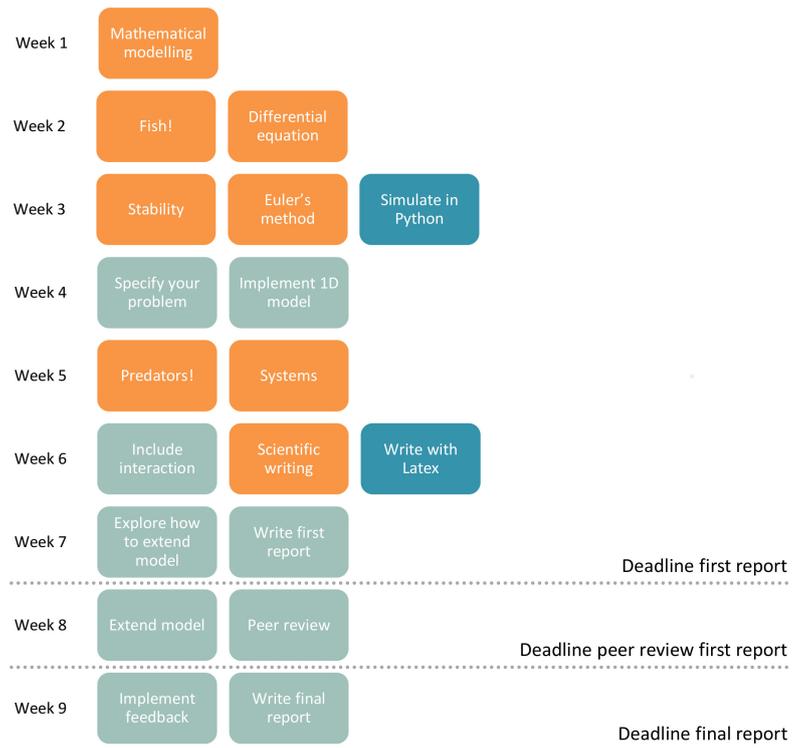

n=18

Perceived value and impact

n=18

Second run, Spring 2018

More:

- ▶ Modules
- ▶ Time for project
- ▶ Feedback on project

Future

Learners would like to learn next

modelling
differential
modeling
mathematical
models
methods

n=17-18

- ▶ More runs
- ▶ Use in on campus practical Modelling A
- ▶ Build more MOOCs
Mathematical Modelling Basics
 - ▶ Optimisation
 - ▶ Stochastic models
 - ▶ More ode & numerical methods
 - ▶ Pde
