

# Cyber Security Next Generation (CSng)

## Activity Report, Term 2019

*Interest group of young cyber security scientists, combining academic career development and growth ambitions with outreach to the broader community, contributing to cyber security research policy development from a young scientists' perspective. CSng believes that by joining forces it can contribute to a strengthening of the Dutch multidisciplinary Cyber Security research community of the future requiring an increase of knowledge and expertise in this emerging field.*

### Who?

Currently the CSng steering board consists of:

- TUD Assistant Prof. Zeki Erkin <http://cys.ewi.tudelft.nl/users/zekeriya-erkin>
- UT Associate Prof. Andreas Peter <http://wwwhome.ewi.utwente.nl/~petera/>
- TU/e Associate Prof. Nicola Zannone <http://security1.win.tue.nl/~zannone/>

Given the desired reach out to other scientific disciplines and general universities (other than technical) a growth of the board can be foreseen in the (near) future.

Other members:

- Cristiano Giuffrida (VU Amsterdam)
- Luca Allodi (TU Eindhoven)
- Peter Schwabe (Radboud University Nijmegen)
- Veelasha Moonsamy (Radboud University Nijmegen)
- Anna Sperotto (University of Twente)
- Andreas Hulsing (Technical University Eindhoven)
- Jair Santanna (University of Twente)

### What?

CSng is about building a community of cyber security researchers and specialists, who consider themselves part of the next generation, and are willing to collaborate and shape the future of Cyber Security in the Netherlands. The inclusiveness extends to all disciplines within the Cyber Security research field. The goal is to have tighter collaboration in Cyber Security in terms of research, education, and corresponding strategies.

### How?

By organizing events such as annual workshops, trainings, and talks, all based on voluntary work and open to everyone. Possibly also facilitating and starting joint research initiatives that come out of these connections.

### Background:

ICT is the driving force and key enabling technology in pivotal domains of our modern digital society. Adequately addressing the security and privacy aspects to ensure a reliable and trusted functioning of ICT is crucial. Cyber Security specialists and scientists work very hard on the design and deployment of secure and privacy-enhanced ICT, in both knowledge institutions and private sectors. Given that the Netherlands is a relatively small country, with limited available resources, it is essential to collaborate in both scientific and educational activities in Cyber Security. **Next = Now:** there is an urgent and significant demand for

highly educated Cyber Security specialists, who need to be trained in the different aspects of Cyber Security, including the technical, legal, economical and ethical aspects. Bottom-up and content led activities in education, research, and PPP collaboration, can play a big role in tackling these challenges. Already since almost a decade, 4TU.NIRICT supports collaboration around cyber security research. First led by Sandro Etalle, Pieter Hartel and Inald Lagendijk. When in 2014 the younger generation took over, the idea to actively create a closer community around Cyber Security came up. The resulting initiative was named 'Cyber Security Next Generation': CSng. This was later recognized and further endorsed by NWO and dcypher. Collaboration with dcypher ([www.dcypher.nl](http://www.dcypher.nl)) is part of the CSng's objective, because giving support and strengthening dcypher's (agenda setting) mission is mutually beneficial for network building, efficiency and capacity advantages.

**CSng provides a platform for (young) researchers and specialists to exchange ideas, develop strategies, and launch collaborative activities for Cyber Security research and education in the Netherlands.**

The following activities took place in 2019

1. CSng website maintenance and updates (<https://csng.nl>)
2. Annual workshop, **4th Cyber Security Workshop in the Netherlands**, took place. The date for the workshop is moved from October to May for the upcoming ones.
3. Annual workshop, **5th Cyber Security Workshop in the Netherlands**, took place
4. The best master thesis competition was organized. The winner was announced during the workshop. The winner was Pietro Frigo (VU) - "GLitch: Practical Microarchitectural Attacks from the GPU."

More information on activities can be found on [www.csng.nl](http://www.csng.nl)
